Identifying a stress condition to which a plant cell has been exposed and producing plants with increased tolerance to these abiotic stresses. Claim 144; SEQ ID NO 1337; 577pp + Sequence Listing; English.

cell has been exposed, comprising: (a) contacting nucleic acid representative of expressed polymuclectides in the plant cell with an array or probes representative of the plant cell genome, and (b) detecting a profile of expressed polymuclectides in the plant cell characteristic of a stress response. The method is useful in the production of transgenic plants, cells and seeds and in producing plants The invention relates to identifying a stress condition to which a plant

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   GAGCTCTTCAACAACTGGGAATGATTCAACATCCTTCCAATAATGCTTGGAGACCTCAAC 1168
with increased tolerance to abiotic stress. The present sequence is that of an Arabidopsis thaliana stress regulated gene (ABZ12196-ABZ17574) used in methods of the invention. Note: The sequence data for this patent is not represented in the printed specification but is based on sequence information supplied to Derwent by the European Patent Office
                                                                                                                                                                                                                                                                      817
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       868
                                                                                                                                                                                                                                                                                                                  628

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         991
producing transgenic plants with commercially valuable properties, i.e. modified or altered desirable traits as compared to a reference plant, such as an alteration in a plant growth characteristic, e.g. growth rate, germination rate of seeds, vigor of plants and seedlings, or leaf and flower senescence. Sequence information related to the polynucleotides and polypeptides can also be used in bioinformatic search methods. The transgenic plant is useful for growing a progeny plant from a parent plant. This sequence represents one of the cDNAs of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ---GGAGGGAAAATCGAAGGCTCAAGACTCAAATTTGTGGACCATCATCTAAGGCAACAAC

The invention relates to a number of isolated Arabidopsis thaliana cDNA sequences and their encoded proteins which are especially transcription factor related cDNA's and proteins. The isolated or recombinant plant transcription factor polynucleotides and polypeptides are useful in

The

shade avoidance.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention describes a transgenic plant comprising a recombinant polynucleotide of any one of more than 500 nucleotide sequences fully defined in the specification or its complement. The method of the invention can be used to produced a plant having altered traits such as: enhanced tolerance to abiotic stress; glyphosphate tolerance; hormone sensitivity; disease resistance; sugar sensing; early or late flowering; altered flower structure, change in stem bifurcations, altered branching pattern, reduced apical dominance, reduced trichome density; lack of trichomes; reduced apical dominance, reduced trichome density; lack of trichomes; increased root flower; altered stem morphology; increased root growth; increased root hairs; altered seed development; altered cell proliferation or cell differentiation; rapid development; altered cell proliferation or cell differentiation; rapid development; compandature sensesence; increased necrosis; increase in seediling or plant size; decreased plant size; leaf morphology; seed morphology; seed biochemistry; increase in root anthocyanins; increase in plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   t any one

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to an isolated nucleic acid molecule encoding a cell proliferation-related polypeptide. The nucleic acid molecule and the encoded polypeptide, and methods are useful for modulating cell proliferation, senescence, differentiation, development, and stress response in plants, and for producing enhanced food crops. The present sequence represents a cell proliferation-related nucleic acid sequence. The present sequence is published separately from the main body of the specification as EPO data.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           945 TGAAGTTGCTGTTGAGCTTACAACTGCTCAAAGACAAGAACTTCAAATGAAAAAAGCCAA 1004

Arabidopsis plants infected with the comycete Perconospora parasitica, Arabidopsis plants infected with the comycete Perconospora parasitica, indicating that they play a role in defence mechanisms. The genes of the invention are regulated by RPP7 or RRPB which act via unconventional signalling cascades, or by the RPP4-dependent pathway. The invention also relates to polyapstides encoded by the pathogen infection-related genes; promoter motifs from pathogen of pathogen resistant transgenic of lants and their progeny comprising a polynucleotide of the invention; and a method of identifying a plant cell infected with a pathogen. The polynucleotide sequences and methods of the invention are useful for identifying plants infected with a pathogen, and for conferring resistance to pathogens such as comycetes, fungi, bacteria, viruses, namotodes and insects (e.g., aphids). The present sequence represents an example and insects (e.g., aphids). The present sequence represents and relations gene whose expression is altered in response to Peronospora parasitica infection. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1010
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1070
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1130
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1190

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to novel plant transcription factor proteins (I) and nucleotide sequences (II) (ADO61534-ADO63778). The sequences can be used to produce transgenic plants, which overexpress (II), where the transgenic plant has an altered trait as compared to a non-transgenic plant or wild-type plant. The transgenic plant comprises can altered trait selected from increased tolerance to abloid stress, increased tolerance to cold, increased tolerance to cold, increased tolerance to cold, increased tolerance to heat, increased colerance to pearly increased tolerance to cold, increased tolerance to heat, increased tolerance to pearly in heat, increased tolerance to low phosphate conditions, increased tolerance to disease, including fungal disease and particularly Erysiphe, Fusarium and Botryvis, increased tolerance to multiple fungal pathogens, increased tolerance to multiple fungal pathogens, increased tolerance to multiple fungal pathogens, increased tolerance to colditions, increased tolerance to multiple fungal pathogens, increased tolerance to multiple fungal pathogens, increased tolerance to colditions, increased tolerance to multiple fungal pathogens, increased tolerance to sugars, altered dioven functions estructure, loss of flower determinacy, altered flower structure, loss of flower determinacy, altered shoot meristem development, altered branching pattern, altered trichome structure, altered valued seed trichome structure, altered call development, altered call development, altered call development, altered call development, altered call death, fast growth, fast growth, altered call defending in leaf shape, increased biomass, large seedlings, dwarfed plants, dathogen in leaf shape, increased leaf shape, increased large, altered senenced altered senescence, abnormal energy leaves, altered senesce
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   altered seed coloration, altered seed size, altered seed shape, large, seed, increased leaf wax, increased leaf fatty acids, altered seed oil content, altered seed protein content, altered seedprenyl content, altered leaf prenyl lipid content, increased anthocyanin levels, and decreased anthocyanin levels. Note: The sequence data for this patent did
                                                                                                                                                                                                                                                                                                 Plant; transcription factor; transgenic plant; abiotic stress tolerance;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        polypeptides, useful for producing transgenic plants with advantageous
properties compared to a reference plant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Reuber TL;

The invention describes a substantiality purities of substance to the invention describes a substantiality purities or in the invention describes a substantiality burities or the invention of the substantiality of the proteins, foreins, APETALA2 (AR2) and AP2-like proteins, Homeo-box proteins (HB) and HB-like proteins, or their functionally active fragments or variants. Condition or their functionally active fragments or variants. Nucleic acid (II) encoding (II), is useful for modifying plant life cycles and/or growth phases, flowering processes, flowering and/or plant architecture and/or flower and/or inflorescence development in a plant, which involves introducing (II), (III) or (IV) into the plant. The carchitecture and/or flower and/or inflorescence development in a plant, which involves introducing (II), (III) or (IV) into the plant. The carchitecture and/or flower and/or flower and seed development, e.g., enhance activities may alter flower, embryo and seed development, e.g., enhance activities may alter flower, embryo and seed development, e.g., enhance activities may alter flower, enbryo and seed development, e.g., enhance of individual or simultenesses of one floral organ in another. Manipulation of CEN or inhibit embryo differentiation and growth or alter flower organ identity of the number of leaves made before flowering.

Considering time and the number of leaves made before flowering in dentity conversion of one floral organ in another. Leads to a change in through conversion of one floral organ in another. Manipulation of flowering plant architecture has a wide range of applications such as: inducing male sterility for hybrid seed production; changing plowering in forgate grasses thus stopping the formation of less digestible stems and increasing branching to enhanced business in fruit trees; altering plant statures, and in blocking flowering and reducing release for allergenic pollen. This sequence encodes a novel floral carget for manipulating plant life cycles Ryegrass; fescue; MADS-box; MADS: MADS-like protein; CENTRORADIALIS; CEN, CEN-like protein; APETALA2; AP2; AP2-like protein; HB; Homeo-box protein; HB-like protein; plant growth; plant architecture; inflorescence development; flower development; embryo development; seed development; flower organ identity; phase change; male sterility; hybrid seed production; herbage quality; early maturing crop; blomass increase; branching increase; blocking flowering; invention describes a substantially purified or isolated polypeptide New substantially purified or isolated polypeptide e.g., MADS-box, CENTRORADIALIS, APETALA2, Homeo-box proteins, isolated from ryegrass or fescue species, useful for controlling plant life cycles and/or growth allergenic pollen; floral meristem identity protein; gene; ss Emmerling M; AGRIC VICTORIA SERVICES PTY LTD AGRESEARCH LTD. grapes, mango, lettuce, honeydew, melon, onion, papaya, peppers, pineapple, spinach, squash, sweet corn, tobacco, tomato, peas, watermelon, rosaceous fruits and vegetable brassicas. The transcription factors are specifically useful for modifying traits associated with plant's pathogen tolerance such as alterations in cell wall composition, trichome number or structure, callose induction, phytoalexin induction, and alterations in the cell death response. Transgenic plants expressing these transcription factors are more tolerant to biotrophic or necrotrophic pathogens such as fungi, bacteria, mollicutes, viruses, nemaçodes and parasitic higher plants. The transcription factors are also

```
germination in heat, increased tolerance to disease, including increased tolerance to low mitrogen conditions, increased tolerance to low phosphate conditions, increased tolerance to low phosphate conditions, increased tolerance to multiple fungal pathogens, increased resistance to increased disease and particularly Erysiphe, Fusarium and Botrylis, concreased consitivity to ABC, altered sugar sensing, increased tolerance to sugars, increased resistance to glyphosate, increased sensitivity to ABC, altered sugar sensing, increased tolerance to increased sensitivity to ABC, altered sugar sensing, increased tolerance to sugars, altered carbon/nitrogen sensing, early flowering, latered flower structure, loss of flower determinacy, reduced fertility, altered shoot meristem development, altered branching pattern, altered stem morphology, altered vascular tissue structure, reduced apical dominance, altered vascular tissue structure, reduced apical dominance, altered density, altered branching pattern, altered trichome structure, altered vascular tissue structure, reduced avoidance, altered seed development, altered cell differentiation, altered seed development, altered seed development, altered seed reportaning altered seed cell proliferation, altered cell differentiation, altered seed coloration, altered seed some cross patterns, increased plants state, increased blomess, large seedlings, dwarfed plants, dark crossed leaf seed coloration, altered seed site and mass, light creased leaf seed coloration, altered seed site, altered seed coloration, altered seed size, altered seed seed shape, altered seed content, altered seed coloration, altered seed size, altered seed shape, large content, altered seed coloration, altered seed size, altered seed shape, and decreased anthocyanin levels. Note: The sequence data for this patent did decreased anthocyanin levels. Note: The sequence data for this patent did content, increased approach in crossed specification, but was obtained in the sequence data for this patent did not form
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to novel plant transcription factor proteins (I) and nucleotide sequences (II) (ADO61534-ADO63778). The sequences can be used to produce transgenic plants, which overexpress (II), where the transgenic plant has an altered trait as compared to a non-transgenic plant or wild-type plant. The transgenic plant comprises an altered trait selected from increased tolerance to abiotic stress,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New recombinant polynucleotide encoding transcription factor polypeptides, useful for producing transgenic plants with advantageous properties compared to a reference plant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               increased
